

Angle 1 — Maternity → Education Gap: Ad Variants

Campaign Goal: Acquire leads at ~S\$2 CPL. Use life-event trigger (pregnancy/new baby) to enter funnel, then bridge to education planning and investment conversation.

Key Rule: Do NOT change Variant A (the proven \$2 CPL ad) without A/B testing first. Run Variant A as control, test B and C.

Ad Variant A — Existing High-Performer (Keep As Is)

Emotional Hook: Practicality + Zero Friction + Life-event Urgency

Primary Text:

Getting ready for your baby? Don't stress — grab this free Baby Starter Pack designed for new parents in Singapore.

Inside:

- ✓ Hospital bag checklist
- ✓ Baby essentials list
- ✓ Delivery cost guide (real SG examples)
- ✓ First-month care cheat sheet
- ✓ Newborn savings planner

Headline: Expecting in 2026? Claim Your Free Baby Starter Pack

Description: Free baby planner + cost guide for new parents.

CTA Button: Download

Creative Direction: Warm, reassuring photo of prepared nursery or smiling pregnant couple. Soft pastel tones (blush pink, mint green). No financial imagery — this is a practical resource ad.

Ad Variant B — Education Shock (Test)

Emotional Hook: Loss Aversion + Parental Identity + Concrete Gap Number

Primary Text:

You're planning for baby's arrival — but are you planning for what comes AFTER?

Singapore university fees have increased every single year since 2010. A single overseas degree by 2043 could cost your family S\$300,000+.

Most parents don't realise the gap until it's too late. Only 45% feel financially prepared.

Download our free Baby Starter Pack — it now includes a Baby 0–18 Cost Timeline showing exactly what you'll need, year by year, so nothing catches you off guard.

Headline: University in 2043 Could Cost \$300K+

Description: Free Baby Starter Pack + 18-year cost timeline for SG parents.

CTA Button: Download Free Guide

Creative Direction: Split-image or side-by-side. Left: happy newborn photo. Right: simple cost timeline bar chart showing costs climbing from Year 0 to Year 18. Large bold text: "\$300,000+" on right side. Clean white background for right panel.

Note: Test this as a secondary creative against Variant A. CPL may be slightly higher but lead quality (meeting conversion) should improve.

Ad Variant C — Guilt Reframe (Test)

Emotional Hook: Guilt-Avoidance + Responsible Parent Identity + Social Proof

Primary Text:

Singapore parents spend S\$1.8 BILLION on tuition every year.

But most are still behind on their child's university fund.

A new study found that 55% of parents say funding their child's education matters MORE than saving for their own retirement. Yet only 45% actually feel prepared.

You don't have to choose between your child's future and yours.

Grab the free Baby Starter Pack for new parents in Singapore — now includes a funding planner so you can do both.

Headline: \$1.8B on Tuition. Still Not Prepared?

Description: Free baby + education funding guide for SG parents. Download now.

CTA Button: Get Free Pack

Creative Direction: Lifestyle photo of parent studying/working at laptop with baby nearby. Overlay text stat: "S\$1.8B spent on tuition in 2023 (Straits Times)". Warm, relatable home setting. Should NOT look like a financial ad — looks like a parenting resource.

Ad Variant D — Urgency Variant (Seasonal/Timed Test)

Emotional Hook: Time-Bound Urgency + Practicality

Primary Text:

If your baby arrives in 2026, you have an 18-year head start.

Or you could wait — and face what 52% of Singapore parents eventually face: going into debt to fund university.

Our free Baby Starter Pack gives you everything for the hospital + first month at home, PLUS an 18-year cost projection so you know what's coming.

10,000+ Singapore families have used this guide. It's free. Takes 10 seconds to download.

Headline: Your Baby's Future Starts Today

Description: Hospital + first month guide + 18-year funding roadmap. Free.

CTA Button: Download Free

Creative Direction: Photo of newborn feet or hands — universally emotional. Minimal text overlay: "18 years go fast." White text on slightly darkened image. Clean and emotional rather than data-heavy.

Testing Recommendation

Variant	Predicted CPL	Use Case
A (existing)	~S\$2	Control — always run
B (education shock)	S\$3–8	Test for meeting conversion
C (guilt reframe)	S\$3–6	Test for volume + quality balance
D (urgency)	S\$2–5	Seasonal test (pre-school registration period, etc.)

Run A vs B first (2 weeks, equal budget split). If B generates more meetings per dollar spent even with higher CPL, shift budget. Keep A running regardless as volume engine.
